QSSI Announces its new HIPAA+™ Compliance Solution

Columbia, MD — Maryland-based QSSI has launched a new commercial business division called Health IT+™. Leveraging QSSI's significant contributions to Healthcare IT solutions for Health and Human Services (HHS), and other Federal and State agencies, we have developed innovative healthcare related solutions geared to the private sector. The Health IT+™ team, led by Kovilvanni Ramaswamy and BM Chittaranjan, will introduce several unique solutions to the healthcare marketplace.

QSSI unveiled HIPAA+™ at the recent 2010 HIMSS Virtual Conference. CEO Bikram Bakshi spoke about HIPAA+™ at the Information Systems Audit and Control Association (ISACA), National Chapter conference in November 2010. Both presentations were extremely well received and generated substantial interest in HIPAA+™ as a major breakthrough in automating and monitoring HIPAA compliance. In the coming months, the Health IT team plans to introduce and market HIPAA+™ through targeted industry forums across the country.

In contrast to other HIPAA compliance solutions, HIPAA+™ uses an automated analytical engine to monitor and alert users to potential privacy and security breach incidents. This unique feature of HIPAA+™ provides a proactive approach to managing the organization's compliance.

Unified Solution - HIPAA+™ is a single source hosted software solution that manages the compliance process efficiently by monitoring all areas of HIPAA compliance - Security, Privacy, Transactions, and Code Sets.

Increased Preparedness for Audits - HIPAA+™ tools provide dashboards and reports to give the organization a clear understanding of its compliance posture in real-time and to identify issues quickly to facilitate the implementation of any corrective actions that may be required.

Lower Risk - HIPAA+™ provides continuous monitoring of the organization's compliance posture and keeps the organization ready for an audit at all times.

Proactive Compliance Monitoring and Management - Because HIPAA+™ detects potential data breaches and provides alerts to users, HIPAA+™ protects from both tangible and intangible losses to reduce the organization's exposure to liabilities.
